FIRULAIXCOIN

WHITE PAPER

firulaixcoin.finance

INTRODUCTION

The creation of the token was inspired by the dog Viringo, known as the "Peruvian Hairless Dog". Its focus is to store the record of the animal's life data and preserve the information of the genealogical descent in a very secure and efficient way. We will promote the use of the token in all clinics, shops, airports and with the owners themselves.

MI OBJETIVO

Firulaix is a civil registry platform developed with BLOCKCHAIN technology, programmed to identify all dogs, cats and captive animals, wild or farmed, with a chip that has a unique global code and will be linked to all the data necessary to create a smart contract. This will facilitate the establishment of a global system of responsible animal ownership.

LEGAL NOTICE

Firulaix, which as a general project includes the token, website, smart contracts and any application ("Firulaix") presented in this white paper, is not a licensed, unlicensed or exempt financial or payment service of any kind and in any jurisdiction. Any terminology used in this white paper, on the website or within the application is intended as a basic reference only, without any actual or legal meaning of the same terms in a regulated and/or financial environment. Firulaix is a decentralized project and is supported by the QOLKREX Foundation. Open source smart contracts, with security audit, permanent and not modifiable in any way. The FIRULAIXCOIN token is strictly a utility token in all jurisdictions and is not and cannot be considered a "security" or otherwise regulated token. FIRULAIX is in no way electronic money and/or fiat money or a stable asset-backed currency, whether global or limited in scope. This white paper in its entirety is not a contract or contractual agreement of any kind, nor is it an invitation, solicitation or offer to invest in FIRULAIXCOIN. Each user of FIRULAIXCOIN represents and warrants that such user has obtained appropriate technical, administrative, regulatory and legal advice before and after reading this white paper or the Website and/or using any part or element of FIRULAIXCOIN.

TABLE OF CONTENTS

OUTLINE

Firulaix's mission is to:

Register all animals and their medical histories; rescue those most in need; educate and focus on animal adoption by creating a mainstream with new concepts such as rewards and personalized NFT's as a digital identity; promote the use of the "FIRU" token worldwide to encourage donations, provide support to shelters, rescuers, volunteers and animal lovers.

Firu Shop

Firu Shop is a store run by the QOLKREX Foundation. It will also promote the sale of many souvenir items. This will support the Foundation's grassroots efforts with the use of their own favorite token in the real world. The proceeds will benefit the project and allow it to help more animals in need.

Firu Wallet

Firu will have its own wallet for users who use the Firulaix token, where they will be able to keep track of all their credits obtained from transactions, wallet balances, currency valuation and constant updates.

Firulaix adoptions

Our project will make it possible for anyone in the world to adopt a pet on our platform.

VALUES

VISION

Firulaix was developed by the QOLKREX Foundation. Our goal is to register all pets, farm animals (fish, livestock, etc.) and wild animals in captivity (zoos) or in protected areas.

COMMUNITY

FIRULAIX will be the largest community of pet lovers in the world. We strive to involve all animal lovers worldwide. We have communities on Telegram, Facebook, Instagram, Discord, Twitter and Reddit.

SOCIAL RESPONSIBILITY

As a responsible and respectful brand with the global animal ecosystem, Firulaix focuses on social responsibility linked to the concept of respect, through dialogue and articulated work, equating the role of all participants in the system and consequently creating relationships of trust in the areas of operational influence. Since the work of our project is limited in time, it is essential to contribute to the progress of the communities through the implementation of new models of sustainability that generate greater opportunities over time.

LONGEVITY

Our ecosystem and foundation will always be the product of our work and the result of the effort that drives our activities. Our token is only one component of the project, which includes the functional part for registrations. Each registration of an animal on the platform has a value of 1 USD in FIRU. All registration entities that form the World Animal Registry use FIRU to register. All these registrations give a value support to our token, generating longevity in time.

World Animal Registry

The World Animal Registry is a decentralized international group working to formalize the registration of animals in order to strengthen the system of responsible animal ownership worldwide.

For years we have witnessed the deterioration of animal welfare around the world due to lack of empathy, irresponsibility, abandonment and cruelty towards animals.

As the years went by, we tried to find a way to gradually reduce the impact of the increase in the number of animals in a state of abandonment.

What did we need?

A measurement system based on formalizing the responsible owners of each animal. This is how the World Animal Registry was created. Our animal registry aims to reduce the cost and complexity of the identification process, while maintaining the security and transparency of the registry through digital identification with blockchain.

OUR MISSION IS

- To identify individual animals, which is essential for health, management and production monitoring.
- To assist in the assessment of the conservation status of species and the implementation of appropriate protection and conservation measures.
- To plan and implement sustainable management of animal populations.
- Implement measures to prevent and control poaching and illegal animal trade.
- Comply with regulations for conserving and managing animal species.
- Contribute to the advancement of knowledge about animal species and their ecology through research.
- Educate the public about the importance of wildlife conservation.

OUR TECHNOLOGY IS BASED ON

1. Chip

It is a small and thin electronic device called an RFID (Radio Frequency Identification) chip that is implanted in an animal's body and contains a unique identification number that can be read by a special scanner

2. Blockchain

Blockchain is a distributed ledger technology used to maintain a secure and immutable record of transactions. Each block contains a series of transactions and a reference to the previous block, creating a blockchain.

3. Digital identity

The use of smart contracts for animal digital identity can help improve the efficiency, transparency and security of animal information management.

4. Traceability

Animal traceability using smart contracts is an emerging technology that enables the automated and secure tracking and recording of animal information.

Who performs the identification?

Our registration bodies are non-governmental organizations, state bodies, municipalities, foundations. Any company that is qualified or dedicated to the civil registration of animals can be part of our organization.

FirulaixCoin

Celo is the mobile-first, carbon-negative, EVM-compliant blockchain ecosystem that envisions a new digital economy for everyone.

It is a regenerative blockchain ecosystem that makes Web3 more accessible to everyone. With Celo, anyone anywhere can self-organize, form guilds, build DAOs, launch initiatives and create businesses that enable prosperous conditions for all.

Two of the biggest barriers to large-scale adoption of cryptocurrencies as a means of payment are ease of use and volatility of purchasing power. Celo is a protocol that addresses these issues with an address-based encryption scheme and a stable value asset.

We will show how these features can be used together to promote a monetary ecology that includes reference currencies, stable-value local and regional currencies, and a social dividend. Our first application is a social payment system centered on mobile phones.

ECOSYSTEM

Exchange - FIRU LP - farming - NFT farming

R Registry

The registration will be done by implanting a common chip with a unique code. This code will be registered through a transaction in the blockchain, creating an ID in an ERC721 smart contract with the name of the animal and will contain all the information of the animal (owner's name, pet's name, date of birth, breed, sex, age,

Balance and development

We have a large team of programmers, designers, content creators, social network administrators with blockchain and cryptocurrency expertise working and supporting the community.

Foundations

Shelters, foundations, adoption homes and volunteer homes will be the most important component of our project. Our goal is to help pets and owners.

Business Partners

We have the support of private companies in the field of clinical, veterinary and international pet transportation in the case of virtual adoption.
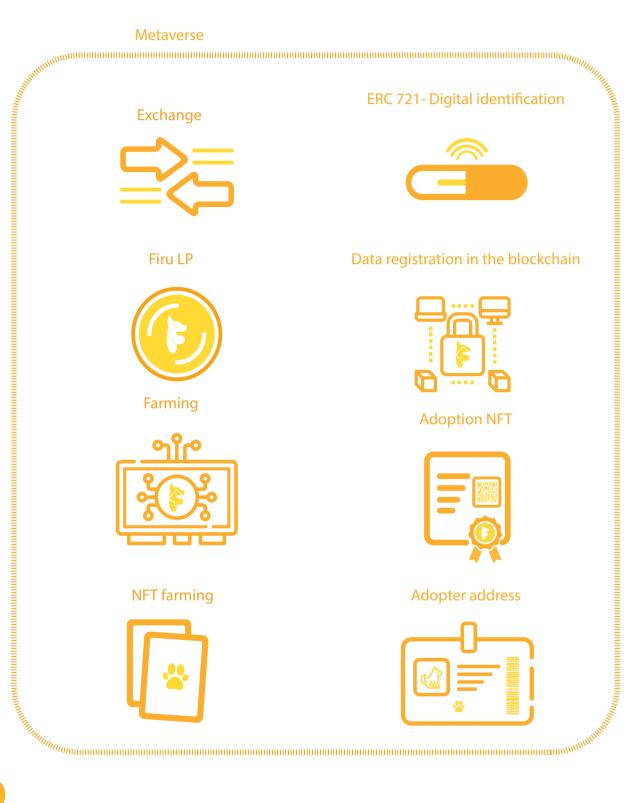

World Animal Registry

The fundamental integration of web3 for staff, animal adopters and commercial entities had a major change. The updated use of this new technology led us to create a layer 2 of the Firulaix project called World Animal Registry, where the platform interacts as web2 and web3.

Q4

Q1

Migration and distribution of 2022 tokens

October - December 2022 .

Migración de la plataforma a CELO.
    Swap
    NFT - Registration of animals FIRU
    contract

Migration of smart contracts dedicated to registries.

Trial phase of registries on CELO.

        Fee's test
        Test of registries
        Speed test
        Testing the operation of the platform

Web and platform customization development for CELO.

January - March 2023.

Process of association of new registration entities.

Update of the Firulaix platform adapted to CELO.

Vesting consensus and token distribution.

Associations and agreements with more companies and registration entities.

We will adapt the registration queries in our main partners and the World Animal

Registry platform.

Firu Map

Q2

Holders

April - June 2023 .

Holders enter vesting contract.

Smart contracts to increase liquidity.

We will integrate them into the Valora Wallet.

Return of FIRU - MOVR tokens to be burned.

Holders will start vesting on June 1.

Q3

Virtual Adoptions and Livestock Modules

July - September 2023 .

Adoption module for shelters in our miniverse.

We will implement livestock registration modules.

Begin building the vaccine registry.

API connections for e-commerce.

We will implement new chips or hardware registry in animals on farms or in captivity.

Q4

Development of new registration technologies

October - December 2023.

We will start the development of identity with animal nose scanning.

We will look for new alternatives for registration and identity integration.

Throughout the year we will have registration campaigns for wildlife and livestock with a calendar according to their season.
